

Lap Band

Lap Band

Lap Band is a minimally invasive surgical procedure that provides a proven solution to weight loss issues. Lap Band was approved by the Food and Drug Administration (FDA) in the United States in 2001. Since then, Lap Band surgery provides overweight patients with an option when other dieting and weight loss procedures have not worked.

Lap Band surgery generally only takes about an hour, and an overnight stay in the hospital may or may not be required. Lap Band surgery reworks the stomach to help reduce the amount of food consumption the person takes in. Many overweight patients have lost 100 pounds or more with Lap Band.

Due to its highly successful rate of weight loss results, Lap Band surgery has been the answer for countless patients.
